This volume takes a global perspective and uses first-hand accounts and stories to examine the problem of human trafficking in its various manifestations around the world.

Welcome to the dreamlike pastel-colored world created by Meyoco. Discover all with Polaris, her first commercial work collection. Meyoco is an illustrator based in Southeast Asia who has gained popularity mainly on social media. Natural elements such as flowers, waves, leaves, stars, and bubbles are suddenly infused with a cute and lovely quality when Meyoco colors them in pastels. Meyoco's wonderfully dreamlike illustrations have won her an increasing number of fans of her social media accounts; as of April 2020, the number of her followers has exceeded 1.22 million on Instagram and 270K on Twitter. This book contains about 240 illustrations that have been carefully chosen from those she has presented in her social media account. It also includes artworks that have been newly drawn for this book, along with some watercolor paintings from Meyoco's early published collections: doujinshi, "Foliage", "REVERIE" and "Bodies of Water". Meyoco also explains the concept of her artworks in her own words. These cute characters and motifs drawn in lovely colors are sure to appeal to people all over the world.

Everyone is familiar with the dodo and the woolly mammoth, but how many people have heard of the scimitar cat and the Falkland Island fox? Extinct Animals portrays over 60 remarkable animals that have been lost forever during the relatively recent geological past. Each entry provides a concise discussion of the history of the animal—how and where it lived, and how it became extinct—as well as the scientific discovery and analysis of the creature. In addition, this work examines what led to extinction—from the role of cyclical swings in the Earth's climate to the spread of humans and their activities. Many scientists believe that we are in the middle of a mass extinction right now, caused by the human undermining of the earth's complex systems that support life. Understanding what caused the extinction of animals in the past may help us understand and prevent the extinction of species in the future. Extinct Animals examines the biology and history of some of the most interesting creatures that have ever lived, including: The American Terror Bird, which probably became extinct over 1 million years ago, who were massive predators, some of which were almost 10 feet tall; the Rocky Mountain Locust, last seen in 1902, formed the most immense animal aggregations ever known, with swarms estimated to include over 10 trillion insects; the Giant Ground Sloth, which was as large as an elephant; and the Neandertals, the first Europeans, which co-existed with prehistoric Homo sapiens. Extinct Animals includes illustrations—many created for the work—that help the reader visualize the extinct creature, and each entry concludes with a list of resources for those who wish to do further research.

This volume investigates how large herbivores not only influence the structure and distribution of the vegetation, but also affect nutrient flows and the responses of associated fauna. The mechanisms and processes underlying the herbivores' behavior, distribution, movement and direct impact on the vegetation are discussed in detail. It is shown that an understanding of plant/animal interactions can inform the management of large herbivores to integrate production and conservation in terrestrial systems.
