Several noise suppressors consisting of combinations of mixing nozzles and ejectors were tested on two full-scale turbojet engines. Maximum sound pressure level reductions of 12 decibels and sound power level reductions of 8 decibels were obtained. The ejectors provided 3 to 5 decibels of the sound power reduction. The effects of ejector dimensions on noise suppression and engine performance were investigated. Ejector lengths of approximately 2.0 standard nozzle diameters and ejector diameters larger than 1.6 standard nozzle diameters provided the greatest additional noise reduction to that obtained with the mixing nozzles alone. The ejector can restore the static thrust loss caused by use of the mixing nozzle or can provide static-thrust augmentation.

Vehicle maintenance.

Following the integrated approach of the Today's Technician Series, students will gain a comprehensive understanding of all-types of automotive computer systems with this state-of-the-art resource. Numerous exercises, complete with ASE checklists makes this package ideal for preparing for ASE certification. It offers a complete overview of systems including; engine control, transmission, brakes, suspension and
