available in the Structural Repair Manual (SRM) or manufacturers component drawings. A technique often used to identify the lay-up schedule on large repairs is to cut away a small piece of the area to be repaired and remove the resin by burning; this leaves the fiber materials behind for easier identification.

Chapter 51 Standard Practices and Structures - General

Considering that the average permanent composite repair, as permitted in Structural Repair Manuals (SRMs), takes roughly 15 hours, according to SAE 's Commercial Airline Composite Repair Committee (CACRC), in-situ composite repairs performed at the flight line can cause flight delays and cancellations.
