### Dealing with disruption - PwC

To stay competitive in the face of increasingly accelerated disruption, many companies need to rethink and retool their offerings and operations. That kind of transformation, however, requires a collaborative effort from all parts of the organization, no matter how different their processes, systems, and cultures have been in the past. Too often, the transformation effort falls flat due to the problems that arise when disparate parts of the company fail to work together with a shared sense ...

### Dealing with Disruption PwC

“Shows how humans have brought us to the brink and how humanity can find solutions. I urge people to read with humility and the daring to act.” —Harpal Singh, former Chair, Save the Children, India, and former Vice Chair, Save the Children International In conversations with people all over the world, from government officials and business leaders to taxi drivers and schoolteachers, Blair Sheppard, global leader for strategy and leadership at PwC, discovered they all had surprisingly similar concerns. In this prescient and pragmatic book, he and his team sum up those concerns in what they call the ADAPT framework: Asymmetry of wealth; Disruption wrought by the unexpected and often problematic consequences of technology; Age disparities--stresses caused by very young or very old populations in developed and emerging countries; Polarization as a symptom of the breakdown in global and national consensus; and loss of Trust in the institutions that underpin and stabilize society. These concerns are in turn precipitating four crises: a crisis of prosperity, a crisis of technology, a crisis of institutional legitimacy, and a crisis of leadership. Sheppard and his team analyze the complex roots of these crises—but they also offer solutions, albeit often seemingly counterintuitive ones. For example, in an era of globalization, we need to place a much greater emphasis on developing self-sustaining local economies. And as technology permeates our lives, we need computer scientists and engineers conversant with sociology and psychology and poets who can code. The authors argue persuasively that we have only a decade to make headway on these problems. But if we tackle them now, thoughtfully, imaginatively, creatively, and energetically, in ten years we could be looking at a dawn instead of darkness.

How to close the gap between strategy and execution Two-thirds of executives say their organizations don’t have the capabilities to support their strategy. In Strategy That Works, Paul Leinwand and Cesare Mainardi explain why. They identify conventional business practices that unintentionally create a gap between strategy and execution. And they show how some of the best companies in the world consistently leap ahead of their competitors. Based on new research, the authors reveal five practices for connecting strategy and execution used by highly successful enterprises such as IKEA, Natura, Danaher, Haier, and Lego. These companies: • Commit to what they do best instead of chasing multiple opportunities • Build their own unique winning capabilities instead of copying others • Put their culture to work instead of struggling to change it • Invest where it matters instead of going lean across the board • Shape the future instead of reacting to it Packed with tools you can use for building these five practices into your organization and supported by in-depth profiles of companies that are known for making their strategy work, this is your guide for reconnecting strategy to execution.

A practical approach to business transformation Fit for Growth\* is a unique approach to business transformation that explicitly connects growth strategy with cost management and organization restructuring. Drawing on 70-plus years of strategy consulting experience and in-depth research, the experts at PwC’s Strategy& lay out a winning framework that helps CEOs and senior executives transform their organizations for sustainable, profitable growth. This approach gives structure to strategy while promoting lasting change. Examples from Strategy&’s hundreds of clients illustrate successful transformation on the ground, and illuminate how senior and middle managers are able to take ownership and even thrive during difficult periods of transition. Throughout the Fit for Growth process, the focus is on maintaining consistent high-value performance while enabling fundamental change. Strategy& has helped major clients around the globe achieve significant and sustained results with its research-backed approach to restructuring and cost reduction. This book provides practical guidance for leveraging that expertise to make the choices that allow companies to: Achieve growth while reducing costs Manage transformation and transition productively Create lasting competitive advantage Deliver reliable, high-value performance Sustainable success is founded on efficiency and high performance. Companies are always looking to do more with less, but their efforts often work against them in the long run. Total business transformation requires total buy-in, and it entails a series of decisions that must not be made lightly. The Fit for Growth approach provides a clear strategy and practical framework for growth-oriented change, with expert guidance on getting it right. \*Fit for Growth is a registered service mark of PwC Strategy& Inc. in the United States

Employee Risk Management presents a straightforward, legally-grounded process that will enable employers to identify, manage and reduce the potential threats that come with every employee - as well as with anyone else who works for the organization, including contractors, volunteers, interns and temps. It covers everything from recruitment through to the end of the employment relationship. Readers will learn how to protect against threats as diverse as: managing employee social media use, an ageing workforce, remote working risks, data security and data protection.

Measuring the Success of Organizational Development: A Step-by-Step Guide for Measuring Impact and Calculating ROI, by Patricia Pulliam Phillips, Lizette Zuniga, and Jack J. Phillips, examines the strategic role of organizational development (OD), explains the reasons for measuring OD efforts, and proposes a framework for measuring effectiveness. Ultimately, OD practitioners will be able to determine how particular OD interventions correlate with business results; determine areas for investments, modifications, and cessation; justify budget allocations; and be more accountable for how money is spent within their organizations. Part I of the book explains the concept of ROI and outlines the steps to ensure accurate measurement of the effects of OD programs. Part II consists of case studies that show “evaluation in action,” providing a conceptual framework and workable suggestions for developing, implementing, and maintaining programs for measuring success in OD programs.

Focussing on the dominance of the Big Four auditing firms – PwC, EY, Deloitte and KPMG – this concise volume provides an authoritative critical assessment of the state and future of the audit market, currently the subject of much debate and the focus of significant government enquiries. Drawing on extensive research and a vast collection of evidence from interviews with insiders, experts and users, it explores the key issues of audit quality, independence, choice and the growing expectation gap. Just as disruptive technologies are overturning other established sectors, this book explores their impact on accounting, financial reporting and auditing. It questions whether the Big Four-dominated audit market is prepared not only for the inevitable disruption of new technologies, but also the challenges of negative public perceptions, cynicism about regulation and demands for greater transparency. In the context of increasing high-profile corporate failures, this book provides a compelling scrutiny of the industry’s failings and present difficulties, and the impact of future disruption. At this crucial time, it will be of great interest to students, researchers and professionals in accounting and auditing, as well as policy makers and regulators.

Although the world’s poorest inhabited continent, Africa has recently shown signs of being a source of economic growth in the coming decades, with increased foreign investment - notably from China - and huge growth in GDP from a number of African states. In contrast to the heaving weight of books focusing on business opportunities in Asia, Eastern Europe and Latin America, Africa has been poorly served by academic publishing. This compendium of scholarship offers cutting-edge knowledge relating to business in Africa. The objectives of this collection include: To shed new light on the socio-cultural and historical underpinnings of business practice in Africa and their implications for promoting entrepreneurship and business behaviour in the region To consider the important constraints on business activities in Africa, and the emerging 'best practice' for redressing their real and potential impacts To facilitate a better understanding of contemporary business practice in Africa through the application of relevant theories and models, including emergent ones. The Routledge Companion to Business in Africa is a comprehensive reference resource that provides the perfect platform for embarking on research and study into Africa from the business perspective.

Advances in Quantitative Analysis of Finance and Accounting (New Series) is an annual publication designed to disseminate developments in the quantitative analysis of finance and accounting. The publication is a forum for statistical and quantitative analyses of issues in finance and accounting as well as applications of quantitative methods to problems in financial management, financial accounting, and business management. The objective is to promote interaction between academic research in finance and accounting and applied research in the financial community and the accounting profession.

Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global Institute, *No Ordinary Disruption: The Four Forces Breaking all the Trends* is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy—often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up poorer than their parents. What sets *No Ordinary Disruption* apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China—Tianjin—will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life— facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.

"Time to get out of Law Law Land and back into the Jungle" Fuelled by advancing technology, new business models, and altered client expectations, the legal industry faces unprecedented change across its entire value chain. Unfortunately, many legal professionals fear the technology train and the convergence of other fields with law. They see legaltech, AI, and bots like "lions and tigers and bears oh my." We (the editors and authors of this book) see opportunity. Although the future may require us to put on "new suits"—it represents an enormous opportunity for lawyers to reinvent ourselves for our own and our clients' benefit. Filled with chapters written by experts in the intersection of law, innovation, and technology, this book provides a global perspective on the diverse legal service delivery ecosystem that will be our future. It provides chapter upon chapter (reason upon reason) explaining why lawyers can and should increase their appetite for disruption in the legal world. So welcome to the jungle and enjoy the ride as we attempt to systematically map the uncharted waters of the future legal realm and simultaneously inspire you to build a new future in law.
