Enterprise Integration - SOA vs EAI vs ESB  
SOA is different from the EAI approach in that it does not depend on a third-party solution. Service oriented architecture is an integration paradigm that is based on a fundamental design principle and provides architectural interoperable services - hence its name. It encompasses legacy systems, software components and message processing capabilities.

Key Differences between ESB, EAI and SOA  
Enterprise Application Integration (EAI) EAI combines computer systems and software to make data integration for a single organization's applications. It achieves this while keeping the business process as simple as possible in terms of data sources and connected apps. Service Oriented Architecture (SOA)

Enterprise Application Integration (EAI) || Useful to clearing up the confusion of integration semantics: Let's firstly clarify that Sirius does not consider EAI to be an approach like SOA or ESB. We consider it to be the broader concept called Enterprise application integration (EAI) since, by definition, EAI is the use of technologies and services across an enterprise to enable the integration of software applications and hardware systems. EAI can therefore be related to middleware as ...

ESB (Enterprise Service Bus) is a piece of infrastructure software that provides a software architecture construct for providing basic services for complex architectures. EAI (Enterprise Application Integration) is an integration framework that can be used to integrate a set of computer systems.

Difference Between ESB and EAI | Compare the Difference ...  
Asynchronous messaging architectures have proven to be the best strategy for enterprise integration because they allow for a loosely coupled solution that overcomes the limitations of remote communication, such as latency and unreliability. That's why most EAI suites and ESB's are based on asynchronous messaging.

EAI vs. SOA vs. ESB. Enterprise application integration has a lot in common with a service-oriented architecture (SOA) and an enterprise service bus (ESB), but they also have some key differences. For starters, an enterprise service bus is actually one model of a service-oriented architecture, just as an SOA is one way to achieve EAI.

How to Master Enterprise Application Integration (EAI)  
Enterprise Application Integration, or EAI, has existed as a technical term since the early 2000s, but the central problem that it attempts to solve is much older. In a nutshell, EAI is an approach, or more accurately, a general category of approaches, to providing interoperability between the multiple disparate systems that make up a typical enterprise infrastructure.
