INTRODUCTION
Geochemical prospecting for minerals includes any method of mineral exploration based upon systematic measurement of one or more chemical properties of a naturally occurring material. The chemical property measured is most commonly the trace content of some element or group of elements. The naturally occurring material may be rock, soil, gossan, glacial debris, vegetation, stream sediment, or water. The purpose of the measurements is the discovery of a geochemical "anomaly ...

and relatively quick method of sampling at regular intervals along predetermined lines or grids. The spacing of the sample intervals will depend on the scale of the survey and on small programmes may be one sample per 50-100m, whereas large surveys e.g. the nation-wide Tellus programme the spacing may be 1-2km per sample.

Where To Download Geological Methods In Exploration and Mining by ...

Seismic methods can be also used for mineral exploration, since they can provide high-resolution images of geologic structures hosting mineral deposits. It is not just surface seismic surveys which are used, but also borehole seismic methods. All in all the usage of seismic methods for mineral exploration is steadily increasing.
