As our understanding of learning focuses on the whole person rather than individual aspects of learning, so the process of learning is beginning to be studied from a wide variety of perspectives and disciplines. This handbook presents a comprehensive overview of the contemporary research into learning: it brings together a diverse range of specialities with chapters written by leading scholars throughout the world from a wide variety of different approaches. The International Handbook of Learning captures the complexities of the learning process in seven major parts. Its 54 chapters are sub-divided in seven parts: Learning and the person: senses, cognitions, emotions, personality traits and learning styles Learning across the lifespan Life-wide learning Learning across the disciplines: covering everything from anthropology to neuroscience Meaning systemse(tm) interpretation Learning and disability Historical and contemporary learning theorists. Written by international experts, this book is the first comprehensive multi-disciplinary analysis of learning, packing a diverse collection of research into one accessible volume.

The new edition of The SAGE Handbook of E-Learning Research retains the original effort of the first edition by focusing on research while capturing the leading edge of e-learning development and practice. Chapters focus on areas of development in e-learning technology, theory, practice, pedagogy and method of analysis. Covering the full extent of e-learning can be a challenge as developments and new features appear daily. The editors of this book meet this challenge by including contributions from leading researchers in areas that have gained a sufficient critical mass to provide reliable results and practices. The 25 chapters are organised into six key areas: 1. THEORY 2. LITERACY & LEARNING 3. METHODS & PERSPECTIVES 4. PEDAGOGY & PRACTICE 5. BEYOND THE CLASSROOM 6. FUTURES

In recent years, multimedia learning, or learning from words and images, has developed into a coherent discipline with a significant research base. The Cambridge Handbook of Multimedia Learning is unique in offering a comprehensive, up-to-date analysis of research and theory in the field, with a focus on computer-based learning. Since the first edition appeared in 2005, it has shaped the field and become the primary reference work for multimedia learning. Multimedia environments, including online presentations, e-courses, interactive lessons, simulation games, slideshows, and even textbooks, play a crucial role in education. This revised second edition incorporates the latest developments in multimedia learning and contains new chapters on topics such as drawing, video, feedback, working memory, learner control, and intelligent tutoring systems. It examines research-based principles to determine the most effective methods of multimedia instruction and considers research findings in the context of cognitive theory to explain how these methods work.

'I would like to enthusiastically recommend The SAGE Handbook of E-Learning Research. An international set of authors have produced a highly readable handbook that covers topics in E-learning research, theory, policy, language and literacy, and design issues. The work draws on multiple perspectives ranging from early work in asynchronous learning networks to community organization in e-learning. This is a large and much needed work that organizes and illuminates issues in E-learning in a way that readers will be able to take away practical advice for their own use. I am quite pleased to see this handbook that provides a very useful organization of knowledge for our field' - John Bourne, Ph.D Professor and Executive Director, The Sloan Consortium (www.sloan-c.org) 'This book is an important contribution to the development of E-learning because its account of the research always begins with the context of learning from which the exploitation of technology can be viewed. The authors help us understand that technology affords new kinds of relationship between the learner and what is learned, and how it is learned. With this rich understanding, the book is able to build the wide-ranging research foundation on which the field can move forward' - Diana Laurillard, Institute of Education, University of London 'A comprehensive and compelling resource that provides a global perspective on a development that is transforming higher education' - David Pilsbury, Chief Executive, Worldwide Universities Network 'Unlike many how-to books on the topic...this work focuses on research for educators and others interested in how technology enhances or diminishes learning. Highly Recommended' - Choice Magazine This handbook provides a state-of-the-art, in-depth account of research in the rapidly expanding field of E-learning. The first of its kind, it provides reviews of over 20 areas in E-learning research by experts in the field, and provides a critical account of the best work to date. The contributors cover the basics of the discipline, as well as new theoretical perspectives. Areas of research covered by the Handbook include: - Contexts for researching e-learning - Theory and policy - Language and literacy - Design issues - History of the field The editors' introduction and many of the chapters show how multiple aspects of E-learning interact. The introduction also provides a new model for researching the field. This book is relevant for everyone in higher education, from undergraduate to faculty, as well as university administrators involved in providing E-learning. It will provide a research background for higher education, including universities, training colleges, and community colleges. It

will also be relevant to those involved in any research and developmental aspect of E-learning - corporate trainers and those involved in online programs at secondary school or in virtual high schools. Whether you are a lecturer, researcher or programme designer, this is an essential read. Richard Andrews is Professor in English at the Institute of Education, University of London and Visiting Professor at New York University's Steinhardt School of Education, Culture and Human Development. Caroline Haythornthwaite is Associate Professor at the Graduate School of Library and Information Science at the University of Illinois at Urbana-Champaign.

This authoritative sourcebook is a timely decision-making tool for companies making the transition to (or already using) e-learning. Featuring all-original contributions from high-profile practitioners and renowned theorists, the book reveals how top companies are implementing and using this crucial employee development tool. Topics include: * analyzing organizational need * selling e-learning to the organization * learning management systems * synchronous collaboration * learning portals * repurposing materials * outsourcing and vendor relations. Other chapters focus on motivation and retention, technological and software options, measuring ROI, and more.

The burgeoning multidisciplinary field of social and emotional learning (SEL) now has a comprehensive and definitive handbook covering all aspects of research, practice, and policy. The prominent editors and contributors describe state-of-the-art intervention and prevention programs designed to build students' skills for managing emotions, showing concern for others, making responsible decisions, and forming positive relationships. Conceptual and scientific underpinnings of SEL are explored and its relationship to children's and adolescents' academic success and mental health examined. Issues in implementing and assessing SEL programs in diverse educational settings are analyzed in depth, including the roles of school- and district-level leadership, teacher training, and school-family partnerships.
