Automation: Paving the way for progress. Ask automotive manufacturers what their primary concerns are today within warehouses and factories and they will probably allude to one of three key things – productivity, safety and waste. Although various solutions are available to help alleviate problems in these areas, one of the most important is materials handling technology.

Paving the way for digital transformation

Industrial Ethernet is actually one of the key drivers behind Industry 4.0 and the IIoT as it enables a whole new level of interconnectivity and communication between people and machines as it relates to manufacturing, while providing access to real-time information that will ultimately enable better control and visibility across the supply chain, automated and streamlined maintenance, and improved collaboration and productivity – in other words, smart manufacturing.

The automation of physical and information logistics processes is one of the most challenging developments in logistics but is increasingly necessary in order to adequately deal with the increasing dynamics and uncertainties arising in logistics networks. If the automation of processes in logistics is systematically driven forward today, autonomous logistics

systems are even conceivable in the future if the potential of digitalization is exploited. While some companies are already innovating in this area, the majority are still in the early stages of development. This book comprises the articles of a Special Issue on the application areas and potentials of automation in logistics on the path to autonomous logistics systems. The scientific contributions intend to contribute to a lively discourse in practice. The articles cover a broad spectrum of physical and informational automation applications with high practical relevance in individual subareas of logistics (e.g., production and transport) or in connection with the entire logistics network. Topics of IoT applications in intralogistics or holistic approaches of data-driven production logistics as well as autonomous driving or digital twin approaches for
