## ~~Inflation and the 2% target | Bank of England~~

Inflation targeting is straightforward, at least in theory. The central bank forecasts the future path of inflation and compares it with the target inflation rate (the rate the government believes is appropriate for the economy). The difference between the forecast and the target determines how much monetary policy has to be adjusted.

## ~~Inflation Targeting: Holding the Line~~

The procyclical interest rate rise must be placed in the context of a much weaker pound, and not considered in isolation. Some elegant models see inflation targeting as a flexible, and under some conditions, even an optimal policy rule (Giannoni and Woodford 2004, and other chapters in Bernanke and Woodford 2004).
