A basic guide to the inspection, repair, and maintenance of tires and tracks for off-road vehicles.

The complex material histories of the Nintendo Entertainment System platform, from code to silicon, focusing on its technical constraints and its expressive affordances. In the 1987 Nintendo Entertainment System videogame *Zelda II: The Adventure of Link*, a character famously declared: I AM ERROR. Puzzled players assumed that this cryptic mesage was a programming flaw, but it was actually a clumsy Japanese-English translation of “My Name is Error,” a benign programmer’s joke. In I AM ERROR Nathan Altice explores the complex material histories of the Nintendo Entertainment System (and its Japanese predecessor, the Family Computer), offering a detailed analysis of its programming and engineering, its expressive affordances, and its cultural significance. Nintendo games were rife with mistranslated texts, but, as Altice explains, Nintendo’s translation challenges were not just linguistic but also material, with consequences beyond simple misinterpretation. Emphasizing the technical and material evolution of Nintendo’s first cartridge-based platform, Altice describes the development of the Family Computer (or Famicom) and its computational architecture; the “translation” problems faced while adapting the Famicom for the U.S. videogame market as the redesigned Entertainment System; Nintendo’s breakthrough console title *Super Mario Bros.* and its remarkable software innovations; the introduction of Nintendo’s short-lived proprietary disk format and the design repercussions on *The Legend of Zelda*; Nintendo’s efforts to extend their console’s lifespan through cartridge augmentations; the Famicom’s Audio Processing Unit (APU) and its importance for the chiptunes genre; and the emergence of software emulators and the new kinds of play they enabled.

Learn how Single-Task Construction Robots (STCRs) can improve productivity in the construction industry with this cross-disciplinary text. This third volume in *The Cambridge Handbooks in Construction Robotics* series discusses the STCRs employed on construction sites since the development of the approach in the 1980s, presents current applications, and highlights upcoming trends in the construction automation and robotics field. Two hundred different types of STCR are presented, from the simplest models comprising simple manipulators and mobile platforms, to those utilizing more sophisticated technologies such as aerial robotics, swarm robotics, exoskeletons, additive manufacturing technologies, self-assembling building structures, and humanoid robotics. Real-world case studies demonstrate the different application scenarios for each approach, and highlight the key implementation and management issues. With an easy-to-follow structure, and including hundreds of color illustrations, it provides an excellent toolkit for professional engineers, researchers, and students.

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Living with a tigress is no joke! This is the true story of a Forest Conservator who risked his life and went beyond the call of duty for Khairi, a tigress he considered as his very own. The book offers the perfect balance of a biography and a scientific study. Khairi is so brilliantly brought to life in this book that you almost expect to hear her padding up behind your chair, purring loudly.

OSS-11.1.4 Security Highlights

We are all drawn to understand the circumstances that lead others to commit unforgivable acts of violence - the moment that turns a caring human being into a killer, the series of events that drive ordinary people to murderous acts of inhumanity, or the slow, premeditated steps of the callous criminal. And the circumstances - and the twisted motivation - behind such violent acts are the subject of Caroline Maxton's fascinating investigation of individuals whose misdeeds have tarnished the history of the Croydon area. She investigates a wide range of murders and unexplained deaths, some of which are truly stranger than fiction. The events cover a span of several centuries, and the locations will be chillingly familiar to the inhabitants of Croydon. Local crimes that hit the national headlines, like the Bentley case of 1952, are covered in fresh detail, but the author concentrates on less well-known but equally intriguing, and shocking, episodes - the bizarre 'mustard and cress' murder of 1870, the brutal murder of Eliza Osborne in 1877, the Kenley Stud Farm mystery of 1921, the Birdhurst Rise poisoning of the late 1920s, the notorious unsolved murder of 11-year-old Miles Vallint of 1959.
