Section 1 providing specific guidance on completing the Contract Agreement, its annex, the specification and schedules which themselves have been increased in number, and Section 2 the guidance notes, discussing general issues to aid understanding, highlighting areas where special conditions may need to be written for the users' requirements.

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will

be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

Its objective is to provide a broad overview of Liquefied Natural Gas (LNG), its hazards and risks, and the issues that fire safety officials may face as LNG infrastructure develops and expands to meet the country's future energy needs. References also indicate several useful sources of information on LNG for additional study. This paper is supported by a companion training video, available from NASFM, which provides more in-depth information on emergency response issues.

Over 40 papers and posters that share the latest practices in emergency planning related to fixed chemical, pharmaceutical, LNG, and petroleum facilities, storage facilities, transportation, and security.

In this paper, some aspects of fire safety management, which have

provided inspiration for the proposed approach will be briefly described. Management is basically the process of navigating the organization along a desired course. As such it is a problem-solving process, which has to react to deviations from the desired course, or to signal that the system is approaching the edges of tolerable performance. The management steers the course in relation to markers representing all the goals of the organization. Fire Safety management concerns itself with the signals linked to risk of harm to workforce, assets, customers, clients, general public or the environment. The main aim of this paper is to focus on the fire safety management and risk management module of the safety management system; details of other modules, such as policies and planning, implementation, monitoring and checking, review and feedback, etc. can be found in results. Port safety is a shared involving the port authority, port operator and its customers involving particularly when LNG, oil products, oil by-products and also general cargoes are handled at dedicated berths. In a society that has become firmly risk averse and intolerant of any accident, the port fire safety management and risk assessment must be widely practiced and capable on preventing and handling any emergency situation. This study focuses on the various aspects fire safety through questionnaires, on site inspection and risk assessment on handling LNG operation in port the area. Result

show that Fire Safety Management in a good place and capable to handle the emergency scenario. Base on the Questionnaires result, 100 respondents selected among the Port Safety Personnel, Staff, Users and Customers showed the Fire and Life safety Aspects such as on Dead End Limits, Travel Distance, Final Exit, Fire Prevention, Fire Protection, Emergency Response and other aspects. This three methodology of study, identified and proving the new finding for certain matters that must be urgently special attention and action. The first section, which focus to evaluate the presents Bintulu Port Fire Safety Management. Base on the results showed that in general, presently Bintulu Port Sdn. Bhd. as the Port Operator were responsible for implementing and manage Port Fire Safety Management proving mostly doing a good practice, capable and responsive organization. Meanwhile the second section focus to ON-Site Physical Facilities Inspection, where is the results showed that only two of eighteen facilities (Land Base and Sea Base Facilities) that been identified and seriously need necessary action to upgrade the equipments and system. The last section of this study was the LNG Operation Risk assessment that showed that the potential scenario that give a highly threat or risk to Bintulu Port (Human, assets and Environment) came from the Collision scenario. Several recommendation been proposed to overcome the finding and at the same time will become a preventive measures to reduce or eliminate
