Neurocritical Care Board Review: Questions and Answers provides clinicians with a thorough review of the complex subspecialty of Neurocritical Care, using a question-and-answer (Q&A) format. The Q&A format is easily readable, high yield, and serves as good practice for test takers or anyone looking to improve or reinforce essential knowledge. The book covers the key topics pertinent to (and found on) neurocritical care boards, and is organized according to the exam core curriculum outline.. A total of 649 questions address both neuroscience critical care (general neurology, neurotrauma, neurovascular and neurosurgical problems) and general critical care topics (systems trauma, cardiovascular, infectious disease, pulmonary and renal issues, and hemodynamic monitoring). Detailed explanations follow in the answer section of each chapter, along with references for further study. Where relevant, neuroimaging, EEG and monitoring waveforms, and other images are included in case questions to allow candidates to familiarize themselves with these tools that form a significant part of the exam. Features of Neurocritical Care Board Review include: Comprehensive, high-yield review that covers all areas tested on the neurocritical care certifying exam Applicability to a wide range of physicians in multiple specialties reviewing for boards or looking to test skills and clinical acumen in this challenging area Question and answer format with detailed explanations and references to facilitate recall of must-know information and help identify knowledge gaps for further attention Material aggregated from multiple specialties into a singular resource for exam study

This companion to The Cleveland Clinic Intensive Review of Internal Medicine includes 62 cases across all subspecialties of internal medicine. Cases have been authored by house officers with reviews by distinguished Cleveland Clinic faculty. Neurointerventional radiology is evolving into a rarified and complex field, with more people today training to become neurointerventionalists than ever before. With these developments comes a need for a unified handbook of techniques and essential literature. In Handbook of Cerebrovascular Disease and Neurointerventional Technique, Mark Harrigan and John Deveikis present the first practical guide to endovascular methods and provide a viable reference work for neurovascular anatomy and cerebrovascular disease from a neurointerventionalist ’ s perspective. This new gold-standard reference covers the fundamental techniques and core philosophies of Neurointerventional radiology, while creating a manual that offers structure and standardization to the field. Authoritative and concise, Handbook of Cerebrovascular Disease and Neurointerventional Technique is the must-have work for today ’ s neurosurgeons, neuroradiologists, and interventional radiologists.

A distinguished international panel of authors define our current understanding of neuronal damage after ischemia and critically review the significant recent developments and progress in cerebrovascular accident (CVA) drug trials, both in animal models and in the clinical setting. These leading basic and fundamental authorities survey such important new drugs as calcium-influx inhibitors, free-radical scavenging drugs, glutamate and glycinergic antagonists, and immune suppressors. They also evaluate all the latest findings concerning calcium homeostasis, glutamate toxicity, gene activation, and the role of free radicals, glycine, and hormones. Chapters devoted to the neuroimaging of stroke, clinical trials, and the role of cerebral immune activation complete this informative collection of cutting-edge reviews.

This unique, concise ready reference for daily use collates for the first time the most useful, practical and simple assessment scales used in geriatric settings. It provides tools to identify clinical conditions and health outcomes objectively and reliably. It is essential as a clinical primer and everyday reference guide for all practising and training members of multidisciplinary teams, including consultants and doctors in specialist training, career grade doctors and general practitioners, and medical students; nurses, health visitors, dieticians, and social workers; allied health professionals such as physiotherapists, occupational therapists, speech and language therapists; and managers of elderly care services.'Assessment is central to the practice of Geriatric Medicine. All members of the multidisciplinary team require a sound knowledge of the basic principles of measurement scales. We need to be competent in using and selecting appropriate scales, understanding which scales are valid and fit for purpose. Unfortunately, up to now, this has been a difficult task often requiring reference to original papers. Dr Gupta's scholarship has come to the rescue. He has trawled through the many hundreds of scales available selecting those most useful for the specialty.This book will be valuable to all members of the multidisciplinary team. Dr Gupta has done an excellent job outlining the theory and practice of measurement scales. He has put together an extremely useful compendium of scales. I congratulate him and wish his publication every success. I can foresee this publication becoming an essential text for every unit library and valuable book for individual clinicians.' - Dr Jeremy Playler in his Foreword. 'This book summarises the most commonly used validated assessment scales which can be used by medical students, postgraduate trainees, consultants and the multi-disciplinary team members. I hope a copy of this book will be kept on every ward, outpatient department and GP practice for daily use and reference' - Professor Bim Bhowmick OBE in his Foreword.
