Peripheral Neuropathy: Asking the Right Questions ...

Peripheral neuropathy is one pattern of damage to the peripheral nervous system.¹ Physical signs of peripheral neuropathy are common in older people.² Recognition of these deficits is particularly important because peripheral neuropathy may contribute to the vulnerability to falls that is common in this age group.^{3,4} More than 30% of patients aged over 65 years will fall at least once per year.⁵ Peripheral neuropathy commonly causes impairment of proprioception and balance, which can be ...

Peripheral neuropathy in older people | Causes & Management

Peripheral neuropathy develops when nerves in the body's extremities, such as the hands, feet and arms, are damaged. The symptoms depend on which nerves are affected. In the UK it's estimated almost 1 in 10 people aged 55 or over are affected by peripheral neuropathy. The peripheral nervous system

Peripheral neuropathy - NHS

Peripheral neuropathies are one of the most common reasons for seeking neurological care in everyday practice. Electrophysiological studies remain fundamental for the diagnosis and etiological classification of peripheral nerve impairment.
