"This textbook is aimed at the trainee and young plastic surgeon, but it is extremely comprehensive and sufficiently detailed for any practitioner. The information is succinct, yet complete and up to date. . . . For a single-volume book, the detailed knowledge presented is impressive. . . . I think this is a great book. It is packed with good and up-to-date information, and I think it will be an invaluable resource for trainees but also for all plastic surgeons. The editors are to be congratulated on achieving a very difficult task with such success." —from a review by Peter C. Neligan, MB, in Plastic and Reconstructive Surgery "This is exactly what the editors of Plastic and reconstructive surgery: Approaches and Techniques set out to achieve in producing this excellent textbook. . . . It is truly an international effort at all levels, as the editors, from Australia (Ross D. Farhadieh), the UK (Neil W. Bulstrode) and Canada (Sabrina Cugno), have joined forces to recruit over 130 international contributors and produce a resource of over 1100 pages that provides a well-organized and thorough, yet succinct, text of the essentials of current plastic surgery. . . . Many of the contributors are world-renowned experts; however, there is also a new generation of young rising stars whose contributions are equally good, providing a new, fresh and contemporary feel." —from the Foreword by Julian J. Pribaz, Professor of Surgery, Harvard Medical School "The authors here have concentrated all this useful information into their chapters in a quite outstanding manner. Any plastic surgeon of whatever maturity will find this an excellent purchase which he/she will have no reason to regret." —from a review by Douglas H. Harrison in Journal of Plastic, Reconstructive & Aesthetic Surgery

There is a paradigm shift in plastic and reconstructive surgery from the interest of developing new surgical techniques into the application of new technologies via research based studies on stem cells, tissue engineering and new field of reconstructive transplantation such as e.g. face, hand or larynx transplants. This approach is relatively novel and introduced to plastic surgery within past decade. Thus there is an urgent need to facilitate access to this new knowledge which was not traditionally a part of plastic surgery curriculum. The most efficient way of introducing these new approaches is via presentation of pertinent to different fields (stem cell, transplantation, nerve regeneration, tissue engineering) experimental models which can be used as a tool to develop technologies of interest by different groups of surgeons. These surgical specialties which will be interested and benefit from the book include: plastic and reconstructive surgeons, microsurgeons, hand surgeons, orthopaedic surgeons, neurosurgeons and transplant surgeons.

Written by experts from London ' s renowned Royal Free Hospital, Textbook of Plastic and Reconstructive Surgery offers a comprehensive overview of the vast topic of reconstructive plastic surgery and its various subspecialties for introductory plastic surgery and surgical science courses. This comprehensive atlas provides a step-by-step guide of new techniques in burn surgery and enables readers to identify the appropriate treatment plan and best possible procedure for each patient pre-surgery before delving into a variety of different surgical possibilities for treatment and recovery. Plastic and Reconstructive Surgery of Burns – An Atlas of New Techniques and Strategies presents new solutions in plastic and reconstructive surgery for burns built upon tried and true techniques of contracture restoration using various flaps and skin grafts. Accompanying illustrations and schemes allow the reader to visualize the process from mapping, dissecting and closing the wound. Preoperative and postoperative results are compared, with extensive illustrations and pictures that cover areas of the body most commonly treated for burns including face, neck, breast, torso, arms, legs, hands, and feet. Outcomes of the surgeries including full functional and aesthetic restoration of treated patients are meticulously photographed and provided alongside each technique. New classifications are presented based on contracture anatomy which showcase the development of new flaps and techniques that elevate functional and aesthetic rehabilitation of burned patients to a new level. The culmination of the decades long career of renowned plastic surgeon, Viktor M. Grishkevich, many new and original techniques, currently unpublished in U.S. literature, are detailed in depth alongside techniques uniquely designed by Dr. Grishkevich and previously published around the world. Plastic and Reconstructive Surgery of Burns – An Atlas of New Techniques and Strategies, has international reach and is meant for plastic and reconstructive surgeons with specialties inhand, maxillo-facial, facial, and ENT. Due to its detailed nature, the atlas is also appropriate for residents in the related fields of surgery as well.

The Oxford Textbook of Plastic and Reconstructive Surgery is a comprehensive reference text detailing all aspects of plastic surgery pertinent to a surgeon in training for specialisation and suitable to use in preparation for the Intercollegiate Examination as all aspects of the curriculum are covered. It is part of the Oxford Textbooks in Surgery series, edited by Professor Sir Peter Morris. This volume is also the perfect resource for practicing plastic surgeons; summarising contemporary trial knowledge as well as discussing anatomy, examination and techniques. Chapters are divided into those that detail basic principles and technique, and those that, on a regional basis, describe the conditions and their treatments that form the wide spectrum of reconstructive and aesthetic plastic surgery. The book is split into 13 comprehensive sections; these include General Principles, Burns, Nerve, Limbs, Facial Trauma, Cosmetic surgery, and Ethics among other key areas in the field. This highly illustrated full colour textbook has an innovative and user-friendly style, including over 1000 photographs, clinical images, and line drawings. Bringing together the expertise of almost 200 specialist contributors in the field, the Oxford Textbook of Plastic and Reconstructive Surgery is a highly valuable source of information.

This newly expanded and updated second edition helps facial plastic surgery fellows and advanced residents in otolaryngology/head and neck surgery find the answers they ' re looking for when preparing to take the American Board of Facial Plastic and Reconstructive Surgery exam.
