Restored Urban Streams By Ann L Riley - au.soft4realestate.com

2. River restoration is an increasingly popular management strategy for improving the physical and ecological conditions of degraded urban streams. In urban catchments, management activities as diverse as stormwater management, bank stabilisation, channel reconfiguration and riparian replanting may be described as river restoration projects. 3. Restoration in urban streams is both more expensive and more difficult than restoration in less densely populated catchments.

Restoring streams in an urbanizing world

To manage and conserve ecosystems in a more sustainable way, it is important to identify the importance of the ecosystem services they provide and understand the connection between natural and socio-economic systems. Historically, streams have been an underrated part of the urban environment. Many of them have been straightened and often channelized under pressure of urbanization.

Are Urban Stream Restoration Plans Worth Implementing?

Stream restoration seeks to provide stream stability while reestablishing ecosystem services, but restoration alone may not mitigate the effects of watershed land-use change and urbanization. Stream restoration activities frequently impact transient storage and hyporheic exchange, the processes by which water movement is slowed down or temporarily detained at the surface or in the streambed.

Restoring Neighborhood Streams - Planning, Design, and ...

Anne Hershey, Abstract: Urban stream restoration projects have been undertaken to improve physical, chemical, and biological integrity, but there has been little assessment of the effectiveness of these projects in restoring ecological function. I looked at the effect of restoration on improving water quality, periphyton, nutrient uptake, and macroinvertebrate communities compared to unrestored streams.

The Effects of Restoration Structures on Nutrient Uptake ...

Furthermore, there is building evidence that streams in mildly sloped, permeable landscapes respond uncharacteristically to urban stress calling for a more nuanced approach to restoration. We evaluated the relative influence of local/scale riparian characteristics and catchment/scale imperviousness on the macroinvertebrate assemblages of streams in the flat, permeable urban landscape of ...
