This book will help you define the minimum steps to produce the critical mass in the purchasing process. Unicist models will help you define your marketing mix in order to define a successful strategy at a minimum cost. This means understanding the nature of the buying process by knowing which actions influence the consumer's mind. The objective of a marketing mix is to establish the successive and simultaneous actions to influence the consumer's or user's purchasing decision. But about 50% of marketing campaigns do not achieve their goals. This was the input for developing, step by step, a unicist ontology-based model that could make marketing more accurate. The unicist marketing mix models the natural structures of the marketing mix within the taxonomy of selling processes. This integrates marketing from product / service design to customer's satisfaction. It manages cross-cultural invariables as well as local characteristics. The unicist marketing mix model provides the fundamentals to design commercial processes and strategies. This book includes the unicist ontology of the marketing mix that has been researched to influence its nature.

Decodes the message held by this enigmatic monument, revealing the alchemical secret of time and the fate of humanity.

Ray Kurzweil is the inventor of the most innovative and compelling technology of our era, an international authority on artificial intelligence, and one of our greatest living visionaries. Now he offers a framework for envisioning the twenty-first century--an age in which the marriage of human sensitivity and artificial intelligence fundamentally alters and improves the way we live. Kurzweil's prophetic blueprint for the future takes us through the advances that inexorably result in computers exceeding the memory capacity and computational ability of the human brain by the year 2020 (with human-level capabilities not far behind); in relationships with automated personalities who will be our teachers, companions, and lovers; and in information fed straight into our brains along direct neural pathways. Optimistic and challenging, thought-provoking and engaging, *The Age of Spiritual Machines* is the ultimate guide on our road into the next century.

Daniel Davis, put into a state of suspended animation for 30 years, awakens to a startling discovery.

This book provides the reader with a clear and precise description of robotics and other systems for home automation currently on the market, and discusses their interoperability and perspectives for the near future. It shows the different standards and the development platforms used by the main service robots in an international environment. This volume provides a scientific basis for the user who is looking for the best option to suit his or her needs from the available alternatives to integrate modern technology in the digital home.

This important work is an attempt to synthesize two areas that need to be treated in tandem. The book brings together the fields of robot spatial mapping and cognitive spatial mapping, which share some common core problems. One would expect some cross-fertilization of research between the two areas to have occurred, yet this has begun only recently. There are now signs that some synthesis is happening, so this work is a timely one for students and engineers in robotics.

An introduction to the techniques and algorithms of the newest field in robotics. Probabilistic robotics is a new and growing area in robotics, concerned with perception and control in the face of uncertainty. Building on the field of mathematical statistics, probabilistic robotics endows robots with a new level of robustness in real-world situations. This book introduces the reader to a wealth of techniques and algorithms in the field. All algorithms are based on a single overarching mathematical foundation. Each chapter provides example implementations in pseudo code, detailed mathematical derivations, discussions from a practitioner's perspective, and extensive lists of exercises and class projects. The book's Web site, www.probablistic-robotics.org, has additional material. The book is relevant for anyone involved in robotic software development and scientific research. It will also be of interest to applied statisticians and engineers dealing with real-world sensor data.
