important subject. The eighth edition of Software Engineering: A Practitioner's Approach has been designed to consolidate and restructure the content introduced over the past two editions of the book. The chapter structure will return to a more linear presentation of software engineering topics with a direct emphasis on the major activities that are part of a generic software process. Content will focus on widely used software engineering methods and will de-emphasize or completely eliminate discussion of secondary methods, tools and techniques. The intent is to provide a more targeted, prescriptive, and focused approach, while attempting to maintain SEPA's reputation as a comprehensive guide to software

The Software Engineering Risk Management (SERIM) application will help you find a safer path through the software development jungle. SERIM takes periodic "readings" on the status of your software development projects so you can focus on high-priority risk areas. After risks are identified, SERIM helps you develop proactive plans for mitigating risk before they sabotage

your projects. SERIM may be used in the pre-requirements phase to develop risk projections that help you plan your projects more realistically. This interactive, easy-to-use Windows application gives you an automated way to determine the risks of your software project. Determine within minutes how risky your software project is during all stages of development. The product is based on the SERIM model in the bestselling book Software Engineering Risk Management. Using the mathematics of probability, Dr. Karolak has designed formulas that assess your projects' risks by entering numeric ratings for a series of metric questions within the ten major software development risk factors, analyze your
