Trends of Periodic Properties in Periodic Table

As you go down a group (a column) in the Periodic Table, the atomic radius starts to increase. This is because we're adding more layers of electrons, smothering the positive protons at the centre. The outermost electrons (known as the valence electrons) start to get further away from the nucleus.

Understanding the trends of the Periodic Table: GCSE 9-1

Periodic trends are specific patterns in the properties of chemical elements that are revealed in the periodic table of elements. Major periodic trends include electronegativity, ionization energy, electron affinity, atomic radii, ionic radius, metallic character, and chemical reactivity. Periodic trends from the changes in the atomic structure of the chemical elements within their respective periods (horizontal rows) and groups in the periodic table.
